

The Enlighted Space application provides accurate, detailed occupancy views and extensive building utilization reports.

OVERVIEW

The cloud-based Enlighted Space application software provides insight into building usage and occupancy patterns using data from the Enlighted Sensor Network. The Space application allows customers to visualize and measure workspace utilization providing detailed views and extensive reports of occupancy patterns. Customers can anonymously, non-intrusively measure usage of workspaces, identify under-utilized spaces, increase efficiency, and develop strategies to increase employee productivity. The application is easy to deploy as no customer premise equipment is needed.

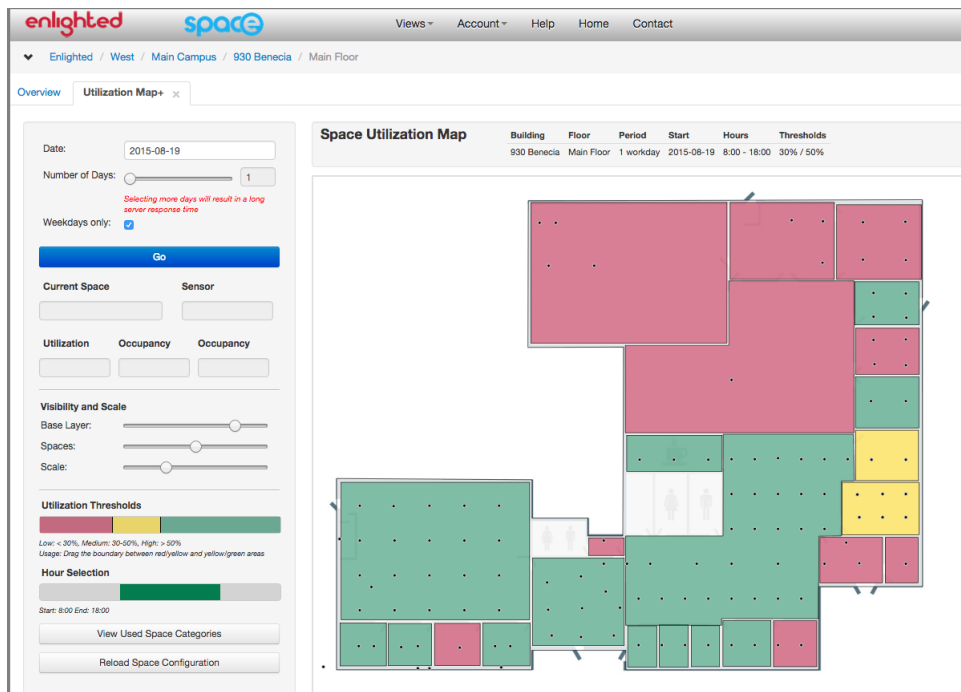

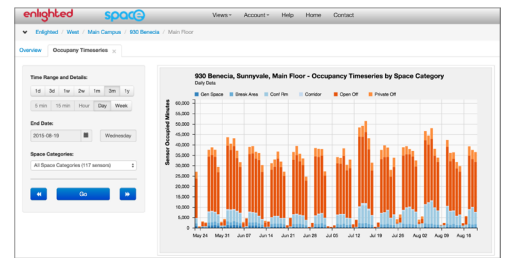

FEATURES AND BENEFITS

Ease of Deployment and Use: Easy to deploy cloud-hosted SaaS-based application with visual maps that can be customized to define workspaces directly on a floor plan.

Visualize and Measure Space Utilization: Detailed insight into space utilization of how people utilize workspace on a floor. Data-driven and visual analysis of actual movement on a particular floor through aggregation and visualization of motion "trail" patterns.

Extensive Reporting: Provides estimates of occupied square footage and costs by department and function, vacancy reports detailing the percentage of unoccupied space, utilization reports showing low, medium, high workspace utilization. Graphs display average and peak utilization in each area of a workspace over time.

Use-cases: Understand utilization of workspaces such as conference rooms, open spaces, and huddle areas to consolidate real estate. Incorporate workspace design changes to increase user productivity for optimizing building utilization. Monitor janitorial and security sweeps to track after-hour activities to support facilities.
